Subject: Public Comment- Chester City Hall Deliberative Mtg: 8 July 2020

This comment is regarding the current state of water quality in Chester, PA per a 2016 report from CBS. The aforementioned report stated that lead in water in Chester, PA was six (6) times the rate higher than those of Flint, MI.

My question is what will council specifically do to remedy the amount of lead in water in Chester immediately? In the short term, what would you recommend residents to do to reduce lead exposure?

- Boil Water Advisory
- Lead Water Filters
- Obtaining a water cooler system

Should all residents of Chester be tested for lead exposure given this has been an issue for four (4) years?

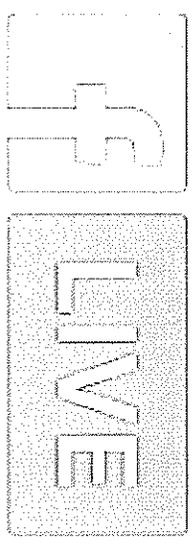

Will an ordinance be issued to curtail lead water post 2021?
